**Proprietary Statement**

This manual contains proprietary information of AMT Datasouth Corporation. It is intended solely for the information and use of parties operating and maintaining the equipment described herein. Such proprietary information may not be used, reproduced, or disclosed to any other parties for any other purpose without the expressed written permission of AMT Datasouth Corporation.

**Product Improvements**

Continuous improvement of products is a policy of AMT Datasouth Corporation. All specifications and signs are subject to change without notice.

**FCC Compliance Statement**

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that the interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into a different outlet on a different circuit.
- Consult the dealer or an experienced Radio/TV technician for help.

This unit was tested with shielded cables on the peripheral devices. Shielded cables must be used with the unit to insure compliance. The user is cautioned that any changes or modifications not expressly approved by AMT Datasouth Corporation could void the user’s authority to operate the equipment.

**Liability Disclaimer**

AMT Datasouth Corporation takes steps to assure that the company’s published engineering specifications and manuals are correct; however, errors do occur. AMT Datasouth Corporation reserves the right to correct any such errors and disclaims any resulting liability. In no event shall AMT Datasouth Corporation, or anyone else involved in the creation, production, or delivery of the accompanying product (including hardware and software) be liable for any damages whatsoever (including, without limitation, damages for loss of business profits, business interruption, loss of business information, or other pecuniary loss) arising out of the use of or the results of use of or inability to use such product, even if AMT Datasouth Corporation has been advised of the possibility of such damages.

RF exposure warning

The equipment complies with FCC RF exposure limits set forth for an uncontrolled environment. The equipment must not be co-located or operated in conjunction with any other antenna or transmitter.

**CAUTION:**

Any changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.
Safety

The user is cautioned that any changes or modifications, which are not recommended by AMT DATASOUTH CORPORATION, could result in the loss of the user's authority to operate the equipment. To ensure compliance, the users must use accessories and peripherals approved by AMT Datasouth Corporation.

**Supplemental Information:** This device complies with the requirement of FCC Part 15 Rules. Operation is subject to the following two Conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Please only use adapters with the following electrical characteristics and certified by current legislation. Using other adapters may damage the device and void the warranty, and pose risks to the user.

**Specifications Input:** 100-240VAC, 50-60Hz, 1.0 A
**Features Output:** 9VDC, 1.56A

The manufacturer declares under sole responsibility that this product conforms to the following standards or other normative documents:

- **EMC:** EN 55022:2006+A1:2007, class A
  - EN 301489-1/-17
  - EN 300328
**Getting Started**

Congratulations on choosing FASTMARK PT1 portable printer, AMT Datasouth Corporation, a leader in the barcode industry. FASTMARK PT1 is ideally designed to bring more efficiency to your business. This manual will help you get to know your new printer and provide you with the required information.

**Unpacking Printer**

After receiving your printer, please check for any shipping damage. Inspect the outside of both the box and the printer for possible damage.

1. Open the top cover of the printer to check that the media compartment is in order.

   **Note:** If shipping damage is discovered, contact your shipping company immediately to file a claim.

2. Check whether you have received the following accessories together with the printer. If there are any items missing, please contact your local dealer.
Package Contents:

1. Printer
2. Power Supply
3. Battery
4. Belt Strap & Screw
5. Sample Media
6. Media Shield
7. CD-ROM
8. Print head Cleaning Pen
9. Quick Installation Guide
Printer Overview

- Platen Roller
- Media Cover
- Media Shield
- Latch Release Button
- Communication LED
- IrDA Window
- Power Button
- Feed Button
- Power LED
- Battery LED
- Media LED
- Media Sensor
- Print Head
- Power Input Jack
- USB/RS232 Port
- Power Input Jack
**Battery**

Each printer package contains one battery pack. The battery must be installed for the printer to work, even if the Power Supply is connected. You must fully charge the battery before using the printer for the first time.

**Installing the Battery**

1. To release the Battery Cover, rotate the Battery Cover Latch 90° to the right as shown below:

   **Note:** We recommend using a coin to rotate the latch.
2. Remove the Battery Cover and install the Battery Pack into the printer:

3. Replace the Battery Cover and rotate the Battery Cover Latch 90° to the left to lock in place:
Charging the Battery

1. After installing the Battery Pack, connect the Power Supply into the printer’s Power Input Jack.
2. Then plug the Power Supply into the AC wall receptacle. The printer's Battery LED will remain yellow during charging.

3. The battery is designed for fast-charge; after about 3.5 hours (210 minutes), the Battery LED will turn off, signifying that the battery is fully charged and ready for use.

Note: Operating the printer when charging will increase charging time. Wait until battery is fully charged to operate the printer.
**Battery & Power Notifications**

1. Do not disassemble the Battery Pack in case of malfunction.

2. Keep the Battery Pack and printer away from fire, liquids, and conductive material, for your own safety and to avoid possible damage.

3. Be sure only to use the Power Supply and Battery Pack provided or approved by AMT Datasouth.

4. Any damage caused by abnormal use will void the warranty.

5. When the battery is not used for a long period, maintain a 50% power level (stored at -4 ~ 77 ° F).
**Loading Media**

1. Press the Latch Release Button on printer to automatically open the Media Cover:

2. Place the media supply roll into the Media Compartment. Make sure the media supply unwinds near Print Head, as in the direction shown below:
3. For media supply rolls with width less than 3 inches:
   Load media supply first, and then align the media roll to the right end for correct detection by the Media Sensor:

4. Install the Media Shield into Media Compartment, and position it closely against the media supply roll:
5. Pull a short length of media out of the printer. Close the Media Cover and press until you hear a click, to properly latch:

6. Tearing Media:

To tear media, pull the media edge against the Tear Bar as in the direction below:
**Wearing Belt Strap**

The convenient Belt Strap design, a standard feature of AMT Datasouth FASTMARK PT1 and, is easy to use and quick to install:

1. Prepare the Belt Strap and the Thumb Screw.
   Locate the Knob on the underside of the printer, right below the Battery Cover latch:

![Diagram of Belt Strap and Printer](image)
2. Attach the Belt Strap onto the Knob.
   Note that the exterior surface of the Belt Strap should face toward you:

3. Insert the Thumb Screw onto the Knob, through the Belt Strap, and tighten clockwise until it is fully secured:
4. With the Belt Strap attached to the printer, place the top of the Belt Strap over your belt:

5. Pull down the top of the Belt Strap to attach the Snap:
Controls & Connections

Self-Test before Connecting

After the Battery is charged and media is loaded, before connecting the printer to a computer or a portable data terminal, perform a printer self-test label to verify that the printer works properly:

Printing a Self-Test Label

● Verify the printer Power is turned off.

● Make sure the Battery is installed, and media is loaded.

● Press and hold the FEED button, and then press the POWER button to turn on the printer.

● After the printer starts to print, release the FEED button.

● Wait until the printer finishes printing, press the POWER button or FEED button to resume normal printing mode.

Note: For more information on self-test printouts, see Page 26. Troubleshooting – Printing a Configuration Report
**Printer Controls and Indicators**

The printer’s controls and indicators are shown in the diagram below:

**Feed Button:**
1. Pressing this button during printing will make printer pause.
2. To feed a blank label.

**Power Button:** Turn the printer ON/OFF.
The following table explains control and indicator functions to help understand LED indications and printer status:

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**Note:**
- If the standby duration exceeds 3 minutes, the printer will turn off automatically in order to decrease power consumption.
- The standby duration is changeable, to be set by operators; the printer default standby duration is 3 minutes.

**Smart Battery Power Management**

The portable printer is equipped with a Li-ion battery pack (7.4V 2200mAH). With the Smart Battery Power Management function, FASTMARK PT1 is able to monitor and automatically remind operators of different battery power status:
**Connecting the Printer**

The FASTMARK PT1 interface includes RS-232, USB (2.0), IrDA, and Bluetooth 2.0. USB and RS-232 communication cables are optional accessories.

**USB & RS-232 Communications:**

No additional setups are required for cable communications.

*Note: Turn off the printer before connecting or disconnecting USB or RS-232 interface cables.*

- **USB:**
  
  Once the USB cable is connected, the printer will detect automatically and link to host, without emitting beeps.

- **RS-232:**
  
  When the printer is off and RS-232 cable is connected, the printer will emit 3 beeps and automatically switch to RS-232 mode. Next time the printer is turned on with RS-232 cable connected, the printer will emit 1 beep (Bluetooth mode), and then 3 beeps to indicate RS-232 mode.

  When RS-232 cable is disconnected, the printer will emit 1 beep and switch back to Bluetooth mode.
Bluetooth & IrDA Communications:

The default communication mode is Bluetooth. Following is an explanation of how to switch between Bluetooth and IrDA modes.

- IrDA:

  How do I switch to IrDA mode from Bluetooth mode?
  When the printer is in Bluetooth mode, press and hold the FEED button for 5 seconds until you hear 2 beeps. The printer will then be in IrDA mode.

- Bluetooth:

  How do I switch to Bluetooth mode from IrDA mode?
  When the printer is in IrDA mode, press and hold the FEED button until you hear one beep. The printer will then be in Bluetooth mode.
  As long as the printer is in Bluetooth mode, the Communication Indicator will remain blue, whether Bluetooth connection to host is linked or unlinked.

**Note:** The Communication Indicator will blink blue during data transmission via all interfaces – Bluetooth, IrDA, RS-232, and USB.

Drivers & Software

FASTMARK PT1 is bundled with smart printer drivers. This way, users can easily print a receipt or label within any Windows applications, e.g. Microsoft Word, labeling software such as Bartender, .etc, in operation systems including Windows 2000/XP/Vista/Windows 7.

The FASTMARK PT1 drivers and Bartender labeling software are available via AMT Datasouth CD-Rom included in the printer package.
**Troubleshooting**

Normally, when the printer is not working properly, the "Power" LED blinks continuously; while printing and communication between the host and printer stops.

**Printer Status Indications**

Printer status and error indications are displayed via LED indicators. Generally, when a malfunction or an abnormal condition is detected, the ERROR LED will blink.

The table below shows the LED indications corresponding to various errors:

<table>
<thead>
<tr>
<th>Status</th>
<th>Blinking LED</th>
</tr>
</thead>
<tbody>
<tr>
<td>PAUSE</td>
<td>POWER LED blinking</td>
</tr>
</tbody>
</table>

**Possible Symptoms & Solutions**

The printer is in PAUSE status.
Press FEED button to return to normal printing mode.

<table>
<thead>
<tr>
<th>Status</th>
<th>Blinking LED</th>
</tr>
</thead>
<tbody>
<tr>
<td>MEDIA OUT</td>
<td>MEDIA LED blinking</td>
</tr>
</tbody>
</table>

**Possible Symptoms & Solutions**

1. The media is not installed or is used up.
2. Printer fails to detect the media gaps/black marks.

<table>
<thead>
<tr>
<th>Status</th>
<th>Blinking LED</th>
</tr>
</thead>
<tbody>
<tr>
<td>SERIAL I/O ERROR</td>
<td>POWER LED blinking</td>
</tr>
</tbody>
</table>

**Possible Symptoms & Solutions**

The format or baud rate of the RS232 communication is inconsistent between the printer and host.
<table>
<thead>
<tr>
<th>Status</th>
<th>Blinking LED</th>
</tr>
</thead>
<tbody>
<tr>
<td>MEMORY FULL</td>
<td>POWER LED blinking</td>
</tr>
</tbody>
</table>

**Possible Symptoms & Solutions**

The printer memory buffer is fully loaded with downloadable soft fonts, graphics or forms.

Check the format and size of stored data with available memory size or call for service.

<table>
<thead>
<tr>
<th>Status</th>
<th>Blinking LED</th>
</tr>
</thead>
<tbody>
<tr>
<td>Print Head overheated</td>
<td>POWER LED blinking</td>
</tr>
</tbody>
</table>

**Possible Symptoms & Solutions**

Printer enters PAUSE status to wait for print head to cool down; printer will resume printing tasks when it is ready.

---

**Performing Calibration**

If labels with gaps/black marks are in use, perform media calibration before printing to make printer index correctly.

1. Verify the Printer Power is off.
2. Properly install labels.
3. Press and hold the FEED button then turn on power; do not release the button until printer starts to feed labels.
4. Then, press FEED button once or twice to check that labels are correctly indexed.

**Note:** You must always carry out calibration when changing media. Failure to do so will result in improper detection by the label sensor.
Printing a Configuration Report

The Configuration report, also known as the Self-Test report, can work as a printer diagnosis tool. Steps to print a Configuration report are listed below:

1. Verify the Printer Power is off.
2. Make sure the Battery is installed and media is loaded.
3. Press and hold the FEED button, and then press the POWER button to turn on the printer.
4. After the printer starts to print, release the FEED button.
5. Wait until printer finishes printing, then press the POWER Button or FEED button to resume normal printing mode.

Configuration (Self-Test) Print Sample:

- Firmware version
- Printed label length
- RS-232 parameters
- Media type setting
- Standby duration (in minutes)
- Bluetooth PIN code
Internal fonts

Font G 0123

Print Head test
**Printer Maintenance**

**Print Head Maintenance Guide**

To keep the Print Head in the best conditions and efficiency and to extend duration for use, regular cleaning action is needed:

**Note:** Always turn off the printer before cleaning.

1. **Cleaning Interval:**
   - It is strongly recommended to regularly clean print heads, or at least every time a label roll is changed (in direct thermal printing mode). In addition, if the printer is operated under critical applications or environments, or if print quality is found to have degraded, please clean print heads more frequently.

2. **Cleaning Material:**
   - The print head heating element is very fragile. To prevent possible damage, please use the Printhead Cleaning Pen supplied in the printer package, or a soft cloth/cotton buds with “Ethanol” or “industrial alcohol” to clean the print head surface.
   - It is strongly recommended to wear gloves during cleaning.
   - Do not touch print head surface with bare hands or with any hard objects.
   - Water and moisture should be kept away from the print head to avoid heating element corrosion.

3. **Cleaning Direction:**
   - When cleaning the print head, always wipe in **One Direction** - Left to Right, or, from Right to Left only, to gently clean the “Heating Line” of the print head without putting excessive stress on the unit. **Do not wipe back and forth** to avoid redistributing dust or dirt from the cleaning cloth/cotton buds onto the print head.

**Cleaning the Media Sensor:**

Debris or dirt on the Media Sensor can cause a misread or unstable detection to index label gaps/black marks. Clean the Media Sensor properly with a cotton bud dampened with alcohol.

**Interface Specifications**

**Serial Interface:**

RS-232C port with a mini-type 10-pin convertor.

Flow Control mechanism is either RTS/CTS or X-on/X-off (control characters are DC2 and DC4).

Programmable parameters are listed below:

**Speed:** 1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200 bauds

**Parity:** Odd, Even or None.

**Data Bits:** 7 or 8 bits.

**Stop Bit(s):** 1 or 2 bits.

**Factory Default Parameters:** 9600 bauds, no parity, 8 data bits, 1 stop bit.
